

Your website score

Review of google.com

Generated on 2015-04-15

Introduction

This report provides a review of the key factors that influence the SEO and usability of your website.

The homepage rank is a grade on a 100-point scale that represents your Internet Marketing Effectiveness. The algorithm is based on 70 criteria including search engine data, website structure, site performance and others. A rank lower than 40 means that there are a lot of areas to improve. A rank above 70 is a good mark and means that your website is probably well optimized.

Internal pages are ranked on a scale of A+ through E and are based on an analysis of nearly 30 criteria.

Our reports provide actionable advice to improve a site's business objectives.

Title Tag

Google	<input checked="" type="radio"/>	google.com
Length: 6 character(s)		
Bing	<input type="radio"/>	bing.com
Yahoo	<input type="radio"/>	yahoo.com
DuckDuckGo	<input type="radio"/>	duckduckgo.com

Ideally, your [title tag](#) should contain between 10 and 70 characters (spaces included).
 Make sure your title is explicit and contains your [most important keywords](#).
 Be sure that each page has a unique title.

Meta Description

Search the world's information, including webpages, images, videos and more. Google has many special features to help you find exactly what you're looking for.	<input checked="" type="radio"/>	google.com
Length: 159 character(s)		
Bing is a search engine that brings together the best of search and people in your social networks to help you spend less time searching and more time doing.	<input type="radio"/>	bing.com
A new welcome to Yahoo. The new Yahoo experience makes it easier to discover the news and information that you care about most. It's the web ordered for you.	<input type="radio"/>	yahoo.com
The search engine that doesn't track you. A superior search experience with smarter answers, less clutter and real privacy.	<input type="radio"/>	duckduckgo.com

Great, your [meta description](#) contains between 70 and 160 characters (spaces included).
 Meta descriptions allow you to influence how your web pages are described and displayed in search results.
 Ensure that all of your web pages have a unique meta description that is explicit and contains your [most important keywords](#) (these appear in bold when they match part or all of the user's search query).
 A good meta description acts as an organic advertisement, so use enticing messaging with a clear call to action to maximize click-through rate.
 Check your Google™ Webmaster Tools account (Click 'Search Appearance', then 'HTML Improvements') to identify any issues with your meta descriptions, for example, they are too short/long, or duplicated across more than one page.

Google Preview

[Google](#)

www.google.com/

Search the world's information, including webpages, images, videos and more. Google has many special features to help you find exactly what you're looking...

[Bing](#)

www.bing.com/

Bing is a search engine that brings together the best of search and people in your social networks to help you spend less time searching and more time doing.

[Yahoo](#)

www.yahoo.com/

A new welcome to Yahoo. The new Yahoo experience makes it easier to discover the news and information that you care about most. It's the web ordered for you.

[DuckDuckGo](#)

duckduckgo.com/

The search engine that doesn't track you. A superior search experience with smarter answers, less clutter and real privacy.

This is an example of what your title and description will look like in Google™ search results.

While Title Tags & Meta Descriptions are used to build the search result listings, the search engines may create their own if they are missing, not well written, or not relevant to the content on the page.

Title Tags and Meta Descriptions are cut short if they are too long, so it's important to stay within the suggested character limits.

Headings

We did not find HTML headings (<H1> to <H6>) on this page.

Your website does not use **HTML headings** (<H1> to <H6>) or it has far too many HTML headings.

Use your keywords in the headings and make sure the first level (<H1>) includes your most important keywords.

While it is important to ensure every page has an <H1> tag, never include more than one per page. Instead, use multiple <H2> - <H6> tags.

Keywords Cloud

This Keyword Cloud provides an idea of your most frequently recurring keywords. They are likely to be the **keywords** with the greatest probability of ranking high in the search engines.

Keywords Consistency

Keywords	Freq	Title	Desc	<H>
★★★ google	2	✓	✓	✗

This table highlights the importance of being **consistent with your use of keywords**. To improve the chance of ranking high in search results with a specific keyword, you should use the most **important keywords consistently** in your content, title, description, H titles, internal links anchor text and backlinks anchor text.

Alt Attribute

We found **2** images on this web page.

1 ALT attributes are empty or missing.

<http://www.google.com/images/icons/product/chrome-48.png>

Alternative text (**the alt attribute**) is missing for several images. Add alternative text so that search engines can better understand the content of your images.

Remember that search engine crawlers cannot actually "see" images, so the alternative text attribute allows you to assign a specific description to each image.

Alternative text describes your images so they can appear in **Google™ Images** search results.

Check the images on your website and make sure **effective alternative text** is specified for each image.

Restrict the number of characters in alt text to 150, including spaces, and minimize the size of images to optimize your website's page load times.

 Text/HTML Ratio 1.4%

This page's ratio of text to HTML code is below 15 percent, this means that your website probably needs more text content. A ratio between 25 and 70 percent is ideal. When it goes beyond that, the page might run the risk of being considered spam. As long as the content is relevant and gives essential information, it is a plus to have more of it.

 Indexed Pages 1,792,585,784

This is the number of pages on your website that are indexed by search engines. The more pages that are indexed, the better, as this offers more opportunity for your website to be found.

A low number (relative to the total number of pages/URLs on your website) probably indicates that your internal link architecture needs improvement and is preventing search engines from crawling all of the pages on your website. You might want to create/check your site's XML sitemap and submit it to the major search engines. You must also build backlinks to your site's internal pages to help search bots crawl and index your web pages.

Check [Google™ Webmaster Tools](#) under Health and Index Status, to keep track of the status of your site's indexed pages.

 Google+ Publisher Great, a rel="Publisher" tag has been detected and is linked to a Google+ page.

Since your website includes the rel="Publisher" link to your Google+ Page, Google will attribute your articles and content to your business. This type of authorship markup is great for your brand. It ensures that your company is featured in SERPs, as opposed to only individual authors as is common with rel="Author".

✔ In-Page Links

We found a total of 20 link(s) including 0 link(s) to files

External Links: NoFollow (0%)
External Links: Follow (11.8%)
Internal Links (88.2%)

Anchor	Type	Follow
Sign in	External Links	Follow
Play	External Links	Follow
YouTube	External Links	Follow
News	External Links	Follow
Gmail	External Links	Follow
Drive	External Links	Follow
Maps	External Links	Follow
+Google	External Links	Follow
Web History	Internal Links	Follow
Settings	Internal Links	Follow
Images	Internal Links	Follow
Install Google Chrome	Internal Links	Follow
Advanced search	Internal Links	Follow
Language tools	Internal Links	Follow
Advertising Programs	Internal Links	Follow
Business Solutions	Internal Links	Follow
More »	Internal Links	Follow
About Google	Internal Links	Follow
Privacy	Internal Links	Follow
Terms	Internal Links	Follow

Limit the number of links to 200 per page. Use [Nofollow](#) to optimize the [juice](#) that you want to pass to each link.

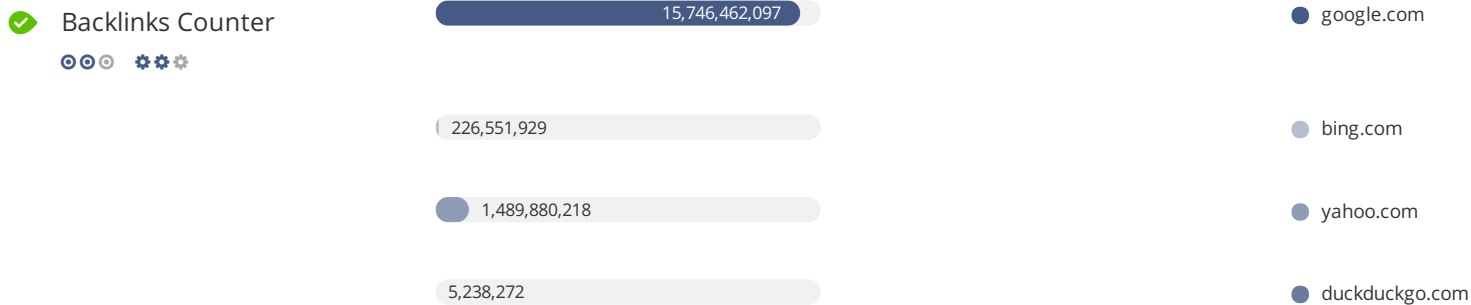

✔ Broken Links

No broken links were found on this web page

Congrats, your web page does not contain any [broken links](#).

Broken links send users to non-existing web pages. They are bad for your site's usability, reputation and SEO. If you find broken links in the future, take the time to replace or remove each one.

Backlinks are links that point to your website from other websites. They are like letters of recommendation for your site. Since this factor is crucial to SEO, you should have a strategy to improve the quantity and quality of backlinks.

✓ WWW Resolve Great, a redirect is in place to redirect traffic from your non-preferred domain.

⊙ ⊙ ⊙ ⚙ ⚙ ⚙

Great, your website directs www.google.com and google.com to the same URL. Redirecting requests from a non-preferred domain is important because search engines consider URLs with and without "www" as two different websites.

✓ IP Canonicalization Yes

⊙ ⊙ ⊙ ⚙ ⚙ ⚙

Good, your website's IP address is forwarding to your website's domain name. To check this for your website, enter your IP address in the browser and see if your site loads with the IP address. Ideally, the IP should redirect to your website's URL or to a page from your website hosting provider. If it does not redirect, you should do an `htaccess 301` redirect to make sure the IP does not get indexed.

✓ Robots.txt <http://www.google.com/robots.txt>

⊙ ⊙ ⊙ ⚙ ⚙ ⚙

Great, your website has a [robots.txt](#) file. A [robots.txt](#) file allows you to restrict the access of search engine robots that crawl the web and it can prevent these robots from accessing specific directories and pages. It also specifies where the XML sitemap file is located. [Click here](#) to check your robots.txt file for syntax errors.

✔ XML Sitemap

<http://www.google.com/sitemap.xml>

http://www.gstatic.com/culturalinstitute/sitemaps/www_google_com_culturalinstitute/sitemap_index.xml

<https://www.google.com/edu/sitemap.xml>

<https://www.google.com/work/sitemap.xml>

http://www.google.com/hostednews/sitemap_index.xml

<http://www.google.com/maps/views/sitemap.xml>

http://www.google.com/sitemaps_webmasters.xml

http://www.google.com/ventures/sitemap_ventures.xml

http://www.gstatic.com/dictionary/static/sitemaps/sitemap_index.xml

<http://www.gstatic.com/earth/gallery/sitemaps/sitemap.xml>

<http://www.gstatic.com/s2/sitemaps/profiles-sitemap.xml>

<http://www.gstatic.com/trends/websites/sitemaps/sitemapindex.xml>

<http://www.google.com/adwords/sitemap.xml>

<http://www.google.com/drive/sitemap.xml>

<http://www.google.com/docs/sitemaps.xml>

<http://www.google.com/sheets/sitemaps.xml>

<http://www.google.com/slides/sitemaps.xml>

<http://www.google.com/forms/sitemaps.xml>

Great, your website has an XML sitemap.

A sitemap lists URLs that are available for crawling and can include additional information like your site's latest updates, frequency of changes and importance of the URLs. This allows search engines to crawl the site more intelligently.

It is also good practice to specify your [sitemap's location](#) in your robots.txt file.

✘ URL Rewrite

Warning! We've detected parameters in a significant number of URLs.

Consider rewriting your URLs.

Your site's URLs contain unnecessary elements that make them look complicated. A URL **must be** easy to read and remember for users. Search engines **need URLs to be clean** and include your page's most important keywords. Clean URLs are also useful when shared on social media as they explain the page's content.

✖ Underscores in the URLs

We found underscores in this URL and/or in your in-page URLs.

http://www.google.com/advanced_search?hl=en&authuser=0

http://www.google.com/language_tools?hl=en&authuser=0

We have detected **underscores** (these_are_underscores) in this URL and/or in your in-page URLs. You should rather use hyphens (these-are-hyphens) to optimize your SEO.

While Google™ treats hyphens as word separators, it does not treat underscores as word separators.

✔ Blocking Factors

Flash: No

Frames: No

Flash should only be used for specific enhancements. Although Flash content often looks nicer, it cannot be **properly indexed** by search engines. Avoid full Flash websites to maximize SEO. This advice also applies to [AJAX](#).

Frames can cause problems on your web page because **search engines** will not crawl or index the content within them. Avoid frames whenever possible and use a **NoFrames** tag if you must use them.

✔ Domain Registration

Created 17 years ago

Expires in 6 years

Domain age matters to a certain extent and newer domains generally struggle to get indexed and rank high in search results for their first few months (depending on other associated ranking factors). Consider buying a **second-hand domain name**.

Do you know that you can register your domain for up to 10 years? By doing so, you will show the world that you are serious about your business.

✖ Blog

We have not found a Blog on this website.

Your website does not have a blog.

In this tough and competitive internet marketing world content marketing rules. While publishing your content on other sites might be a good strategy, publishing it on your own site garners more benefits.

Starting a blog is a great way to **boost your SEO** and attract qualified visitors.

Use these **great tips** to boost the SEO performance of your blog.

Related Websites

URL	Pages	Backlinks	PR	Score

This lists the websites related to your domain. Some may be competitors while others may be websites with related content.

You may be able to use this information to see how your competitors are doing.

Resource: [Use tools to learn more about your competitors' web marketing strategies.](#)

✓ Mobile Friendliness

Very Good

This web page is super optimized for Mobile Visitors

✗ Mobile CSS

✗ Mobile Redirection

Great, your site is well-configured for visitors from mobile devices. Mobile Friendliness refers to the usability aspects of your mobile website and Google™ has recently announced that it will use this as a ranking signal in mobile search results.

🔍 Mobile Rendering

The number of people using the Mobile Web is huge; over 75 percent of consumers have access to smartphones. Your website should look nice on the most popular mobile devices.

Tip: Use an analytics tool to track mobile usage of your website.

✓ Touchscreen Readiness

Perfect, the most important buttons/links are large enough to be tapped easily.

Great, your User Interface allows for visitors to easily tap targets on their touchscreen. To go even further into improving your User Interface, use size and density buckets to accommodate varying device sizes and screen densities.

✓ Mobile Compatibility

Perfect, no embedded objects detected.

Great, your website does not embed any special types of web content, such as Flash, Silverlight or Java, so your content can be accessed on all devices.

✔ Font Size Legibility

Perfect, this web page's text is legible on mobile devices.

You can find additional font recommendations for mobile devices in Google™'s [typography guidelines](#) for Android.

✔ Mobile Viewport

Great, a configured viewport is present.

The content fits within the specified viewport size.

Great, the [viewport](#) is well configured.

Keep in mind that since the width (in CSS pixels) of the viewport may vary, your page content should not solely rely on a particular viewport width to render well. Consider these additional tips:

- Avoid setting large absolute CSS widths for page elements.
- If necessary, [CSS media queries](#) can be used to apply different styling depending on screen size.
- Ideally, serve responsively-sized images.

✔ Mobile Speed

Very Fast

✘ Optimize images

✘ Minify JavaScript

Avoid landing page redirects

Enable compression

Leverage browser caching

Your mobile/responsive website is adapted to high latency mobile networks. It is possible to make it even faster using [PageSpeed](#) and/or by implementing [SPDY protocol](#).

🔍 Mobile Frameworks

No mobile frameworks have been detected.

Mobile or [responsive frameworks](#) are an important part of website optimization as they assist developers in creating applications which are applicable to multiple devices.

🔍 URL http://google.com
Length: 6 character(s)

Keep your URLs short and avoid long domain names when possible.

A descriptive URL is better recognized by search engines. A user should be able to look at the address bar and make an accurate guess about the content of the page before reaching it (e.g., <http://www.mysite.com/en/products>).

Keep in mind that URLs are also an important part of a comprehensive [SEO strategy](#). Use clean URLs to [make your site more "crawlable" by Google™](#).

Resource: Search for a [good domain name](#). If no good names are available, consider a [second hand domain](#). To prevent brand theft, you might consider trademarking your domain name.

✅ Favicon  Great, your website has a favicon.
🔍 ⚙️ ⚙️ ⚙️

Great, your website has a [favicon](#). Make sure this favicon is [consistent with your brand](#).

Resource: Check out this [amazing idea](#) for improving the user experience with a special favicon.

✅ Custom 404 Page Great, your website has a custom 404 error page.
🔍 ⚙️ ⚙️ ⚙️

Take advantage of the opportunity to provide a [beautiful](#) 404 Error Page for your visitors.

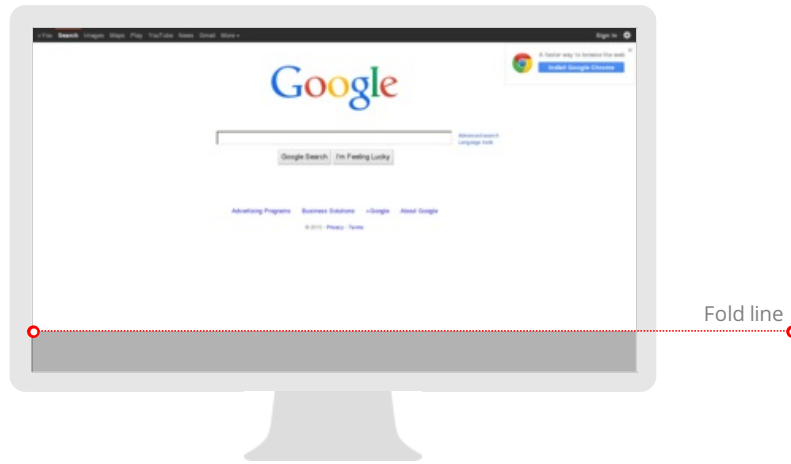

❌ Conversion Forms We could not find a Conversion Form on this page.
🔍 ⚙️ ⚙️ ⚙️

Add a [conversion form](#) for repeat visitors. It could be used to sign up for a subscription, get an email address of a visitor or close an online sale. [Converting visitors](#) into prospects/clients is probably the most important goal for your website.

After adding a conversion form to your site, it is important that you [optimize your website](#) to boost conversions.

Above the Fold Content

Place the most important content **above the fold line**.

When designing your homepage, make sure that your most important content is placed above the fold (the top section, which is visible without scrolling).

Tip: Check Google Analytics to find out what the most common screen resolutions are among your site visitors.

Page Size

17.4 KB (World Wide Web average is 320 Kb)

Two of the main reasons for an increase in page size are images and JavaScript files.

Page size affects the speed of your website; try to keep your page size below 300 Kb.

Tip: Use images with a small size and optimize their download with [gzip](#).

Load Time

0.07 second(s) (238.97 kB/s)

● google.com

0.08 second(s) (784.92 kB/s)

● bing.com

0.65 second(s) (497.58 kB/s)

● yahoo.com

0.01 second(s) (615.72 kB/s)

● duckduckgo.com

Your website is fast. Well done.

Site speed is becoming an [important factor](#) for ranking high in Google™ search results and enriching the user experience.

Resources: Check out Google™'s developer tutorials [for tips](#) on how to make your website run faster.

Monitor your server and receive SMS alerts when your website is down with a [web monitoring service](#).

Language

Declared: *English*

Detected: *English*

Great, you have declared the language.

Make sure your declared language is the same as the language detected by Google™.

Tips for multilingual websites:

- Define the language of the content in each page's HTML code.
- Specify the language code in the URL as well (e.g., "mywebsite.com/fr/mycontent.html").

Printability

We could not find a Print-Friendly CSS

This is a special CSS style sheet which ensures that unnecessary interface designs and images are left out when printing pages from your site, saving the user a lot of ink.

It is just another way to provide a rich user-experience.

Metadata

microdata WebPage

Metadata is used to generate **Rich Snippets** in search engine results. It is a way for website owners to send structured data to search engine robots; helping them to understand your content and create well-presented search results.

Google™ supports rich snippets for the following content types: **Reviews, People, Products, Businesses and Organizations, Recipes, Events and Music**. If your website covers one of these topics, then we suggest that you annotate it with **Schema.org** using **microdata**.

Domain Availability

Domains (TLD)	Status
google.net	Expires in a year
google.org	This domain is booked
google.info	This domain is booked
google.biz	Expires in a year
google.eu	This domain is booked

[Register](#) the various extensions of your domain to protect your brand from cybersquatters.

Typo Availability

Domains (TLD)	Status	
foogle.com	This domain is booked	🔒
giogle.com	This domain is booked	🔒
goigle.com	This domain is booked	🔒
goofle.com	This domain is booked	🔒
gooble.com	This domain is booked	🔒
googke.com	This domain is booked	🔒
googe.com	This domain is booked	🔒

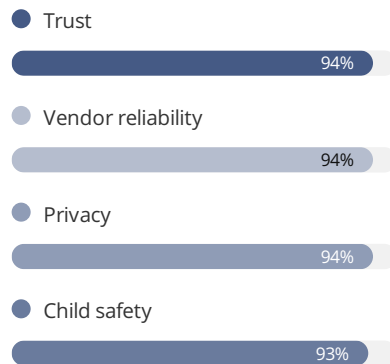

Register the various typos of your domain to protect your brand from cybersquatters.

✓ Email Privacy

Good, no email address has been found in plain text.

Malicious bots scrape the web in search of email addresses and plain text email addresses are more likely to be spammed.

✓ Trust Indicators

This data is provided by WOT™.

✓ Safe Browsing

Great, your website is safe.

No evidence of phishing and/or malware has been detected.

Server IP

216.58.217.142

Server location: Mountain View

Your server's IP address [has little impact](#) on your SEO. Nevertheless, try to host your website on a server which is geographically close to your visitors. Search engines take the geolocation of a server into account as well as the server speed.

Use [DNSstuff](#) for comprehensive reports on your server.

Get to know the technologies used for your website. Some codes might slow down your website. Ask your webmaster to take a look at this.

✔ Speed Tips

Congratulations! Your website's speed is fully optimized.

Perfect, your server is using a caching method to speed up page display.

Perfect, your website doesn't use nested tables.

✘ Too bad, your website is using inline styles.

Perfect, your website has few CSS files.

Perfect, your website has few JavaScript files.

Perfect, your website takes advantage of gzip.

Website speed has a huge effect on SEO. [Speed-up your website](#) so search engines will reward you by sending more visitors. Also, conversion rates are far higher for websites that load faster than their slower competitors.

✘ Analytics

We didn't detect an analytics tool installed on this website.

Web analytics let you measure visitor activity on your website. You should have at least one analytics tool installed. It is also good to install one extra tool to have a confirmation of the results.

Analytics Tools: [Google™ Analytics](#), [Quantcast™](#), [SiteCatalyst™](#), [Piwik™](#), [chartbeat™](#), [Clicky™](#), [ClickTale™](#), etc.

✘ W3C Validity

Invalid: 28 Errors, 4 Warning(s)

Use valid markup that contains no errors. Syntax errors can make your page difficult for search engines to index.

To find the detected errors, run the [W3C validation service](#), or check [Validator.nu](#) to make sure you don't miss an error.

[W3C](#) is a consortium that sets web standards.

👁 Doctype

HTML5

Declaring a [doctype](#) helps web browsers to render content correctly.

✔ Encoding

Great, language/character encoding is specified: UTF-8

Specifying language/character encoding can prevent problems with the rendering of [special characters](#).

✔ Directory Browsing No

Great! Your server prevents visitors from browsing your directory by accessing it directly, this is excellent from a security standpoint.

✔ Server Signature No

Good, your server signature is off. This is excellent from a security standpoint.

✔ SSL Secure Great, your website is SSL secured (HTTPS).

✘ Your website's URLs do not redirect to HTTPS pages.

✘ Your headers are not properly set up to use STS.

The SSL certificate expires in 2 months.

The certificate issuer is Google Inc.

Modern websites tend to be SSL secured (HTTPS) as it provides an extra security layer while logging in to your Web Service. In 2014, [Google™ announced](#) that an HTTPS (vs HTTP) website would receive an extra boost in their ranking.

While switching to HTTPS, make sure to keep your SEO optimized and see to it that your website will still run quickly. Follow these best practices for a smooth transition:

- Use a serious issuer to purchase your SSL certificate
- Redirect all of your HTTP pages to the HTTPS version of your website
- Use a Security Token Service (STS) in your headers
- Renew your SSL certificate every year, before it expires
- Make sure that all of your content (CSS, etc.) is linked to HTTPS

This is a list of the local directories where your business has been found. Take care of your listings in local directories; since maps are now an integral part of search results, your [G+ Local page](#) may have more visitors than your website!

It is important to make sure that your business details are correct in each directory where you are listed. Find the directories in your country (USA, UK, Spain, France, Canada, Australia, Brazil, and India) and enhance your listings with pictures, video, schedules and as many customer reviews as possible.

google is popular over the world..! – Phon Andy

 May 17, 2012 10:56 PM

You can only access the building at 2590. Its tight security. – John Vajda

 April 28, 2012 10:18 PM

Near the mother ship! – Chrissy Morin

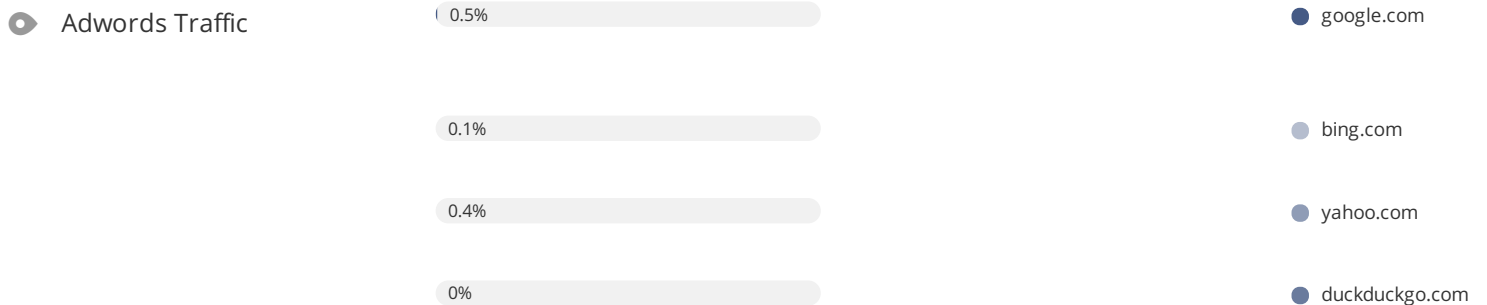

These are the latest reviews of your business that can be found in local directories. Surveys show that 90 percent of customers say buying decisions are influenced by [online reviews](#) so take the time to make a good impression and [gather positive feedback](#). [Strategies for gaining reviews](#) may differ by audience or business type; in general, consider asking for reviews, making it easy to send in feedback and having a prominent social presence.

We use multiple tools to estimate web traffic, including Google™ Trends and Alexa™. Nevertheless, your analytics will provide the most accurate traffic data.

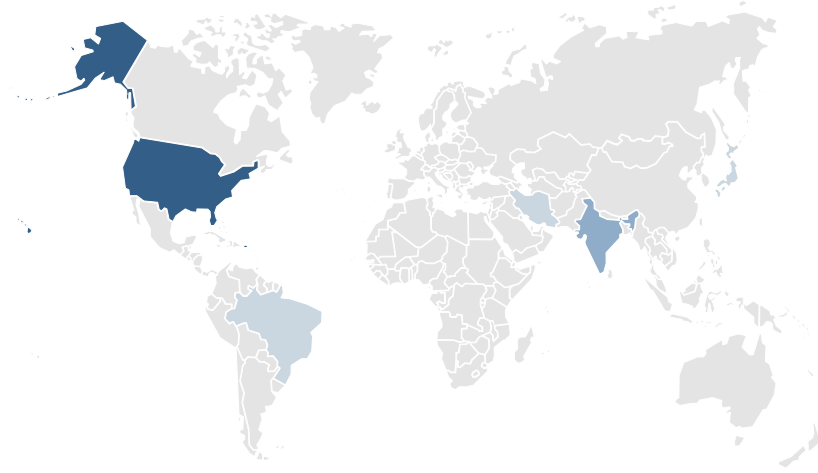

A low rank means that your website gets a lot of visitors. Your [Alexa Rank](#) is a good estimate of the worldwide traffic to your website, although it is not 100 percent accurate. Reviewing the [most visited websites](#) by country can give you valuable insights. [Quantcast](#) provides similar services.

This is an estimation of the traffic that is being bought through [AdWords™](#) vs. unpaid Organic Traffic. This data is provided by [SEMRush™](#).

Visitors Localization

3 37

Popular Countries	ccTLD	Status
United States	google.us	This domain is booked
India	google.in	This domain is booked
Japan	google.jp	This domain is booked
Brazil	google.com.br	This domain is booked
Iran	google.ir	This domain is booked

We recommend that you book the domain names for the countries where your website is popular. This will prevent potential competitors from registering these domains and taking advantage of your reputation in such countries.
